

NUMBERS ONLY TELL *Half the Story*

Ten million Americans live with essential tremor¹ (ET), the most common movement disorder, which typically causes uncontrollable shaking in the hands. While this underscores the scale of ET's impact, it fails to express the unique individuals behind these figures. While living with essential tremor comes with challenges, patients can Get A Grip on ET and pursue what brings them joy. Help us tell the story of all those living with ET.

MANY ODDS TO *overcome*²

91%

of patients surveyed indicated their condition caused an overall decline in quality of life.

87%

of patients surveyed reported a loss of self-esteem and confidence.

95%

of patients surveyed reported that ET left them unable to perform daily tasks.
